

OpenCode Free Models & GUI Quickstart

Complete visual walkthrough to unlock and run Nebius / OpenCode Zen free models with zero configuration fees or API credit cards.

METHOD 1 • TERMINAL MODE

CLI Setup Walkthrough

1 Install OpenCode

Install via Homebrew or npm across macOS, Linux, or Windows:

```
brew install opencode
# or npm i -g opencode-ai
```

2 Authenticate (Free)

Open terminal in your project directory:

```
opencode
```

Type `/connect` → choose **OpenCode Zen**. Sign in with GitHub/Google to fetch your free auth token.

3 Search & Enable Model

Type `/models` inside the session. Use the search bar to filter by **Free** models (e.g. *Big Pickle*, *Ox Alpha*) and hit Enter.

METHOD 2 • EFFORTLESS EXPERIENCE

Why OpenCode GUI is 10x Easier

1 1-Click App / Extension Install

Download **OpenCode Desktop** (macOS/Windows/Linux) or install the **OpenCode GUI extension in VS Code** from the Extensions Marketplace.

2 Zero Terminal Commands

No CLI syntax, shell scripts, or PATH troubleshooting needed. Authentication happens cleanly through a native browser popup.

3 Instant Point & Click Model Selector

Click the model badge right in your chat bar to reveal the dropdown seen in your screenshot. Free models are tagged with green/grey badges.

Workflow Comparison: CLI vs. GUI

Workflow Feature	OpenCode Terminal CLI	OpenCode GUI (Desktop / VS Code)
Model Selection	Slash commands (<code>/models</code>), arrow navigation	Visual dropdown menu with 1-click model switching
File Diffs & Code Changes	Console diff output, manual git inspection	Side-by-side interactive split diff view with 1-click accept
Undo / Revert Edits	Manual git reset or slash command checkpointing	Visual session history with 1-click Undo / Restore buttons
Context & File Picking	Must type exact relative paths (e.g. <code>@src/app.ts</code>)	Drag & drop files, clipboard images, or click file tree

Supported Free Models in OpenCode Zen / Nebius

Available with zero subscription or API charges:

Big Pickle **FREE** — Reasoning & agent tasks

Ox Alpha (Unlimited) **FREE** — High throughput coding

Nemotron 3.5 Lightning **FREE** — Ultra-low latency edits

Nemotron 3 Ultra **FREE** — Deep code comprehension

MiMo V2.5 **FREE** — Multimodal & lightweight

Hy3 / Muse Spark 1.2 **FREE** — Fast scaffolding & refactors
