

UnoRouter: Free Multi-Model AI Gateway

Step-by-step setup & usage guide

Sign-up / Token Page

`unorouter.com/token`

API Base URL

`https://api.unorouter.com/v1`

Example Free Models

`glm-5.3-flash:free | glm-5.3-thinking:free | qwen3.8-27b:free`

Step 1 — Create your account

Go to `unorouter.com/token` and sign up with Discord or GitHub. No credit card required.

Step 2 — Create your API key

On the same token page, generate your API key and copy it immediately — you'll need it for both the web chat and API/code access.

Step 3 — Browse the free models

On `unorouter.com`, browse the model list and look for the **:free** tag — examples include `glm-5.3-flash:free`, `glm-5.3-thinking:free`, and `qwen3.8-27b:free`.

Step 4 — Test a model in the web chat

UnoRouter has a built-in chat app at `unorouter.com` — pick any model and start chatting immediately, no code needed, to check quality before integrating.

Step 5 — Set up the connection in code

Since UnoRouter is OpenAI-compatible, you only change 3 things — key, base URL, model name. See the code block below.

```
import OpenAI from 'openai';

const openai = new OpenAI({
  baseURL: 'https://api.unorouter.com/v1',
  apiKey: 'YOUR_UNOROUTER_API_KEY',
});

const completion = await openai.chat.completions.create({
  model: 'glm-5.3-flash:free',
```

```
messages: [{ role: 'user', content: 'Hello!' }],
});
```

Step 6 — Or plug it into a coding tool

Claude Code, Cline, OpenCode, and Kilo Code all support custom OpenAI-compatible endpoints. Set the base URL to `https://api.unorouter.com/v1`, paste your API key, and select any `:free` model.

Step 7 — Switch models freely

One key covers all 200+ models on UnoRouter — to try a different model, just change the `model` string in your request. No new key or setup needed.

Step 8 — Watch free-tier limits

Free models can carry rate caps, and which models are free can shift over time as UnoRouter rotates channels — check the model list occasionally to confirm current availability.

Notes: UnoRouter is an open-source AI gateway aggregating 200+ models (Claude, GPT, Gemini, DeepSeek, Kimi, GLM, Qwen and more) behind one OpenAI-compatible API key, with a subset of models available for free. The project publishes its channel-verification process to guard against spoofed/substituted models, a known issue with some other resale-based gateways. Free-tier model availability and limits can change over time — always confirm current status on unorouter.com before relying on it in production.
