

SETUP GUIDE

GLM-5.3 in ZCode

Installation and setup guide for running GLM-5.3 for free in ZCode

ENGINE

GLM-5.3 / GLM Series

PLATFORM

ZCode Desktop App

OFFICIAL DOCS

zcode.z.ai/en/docs/install

Step-by-Step Setup Instructions

1 Download ZCode

Visit <https://zcode.z.ai/en/docs/install> and download the installer for your operating system:

macOS (Apple Silicon / Intel)

Windows (x64 / ARM64)

Linux (.AppImage)

2 Install & Launch ZCode

- **macOS:** Open `ZCode.dmg` and drag into Applications.
- **Windows:** Run the installer wizard and launch from Start menu.
- **Linux:** Make executable (`chmod +x ZCode-*.AppImage`) and run.

3 Open & Complete Initial Setup

Click **Start using ZCode** on the onboarding screen and select your workspace/project directory.

4 Connect Account / Model Provider

Click **Connect** in the bottom-left corner of the interface. Choose **Connect Z.ai** or **Connect BigModel** to sign in and activate your free account allocation.

5 Select GLM-5.3 & Start Prompting

In the model picker / settings, choose **GLM-5.3** as the active engine for your ZCode Agent. Enter instructions or codebase tasks in the chat box to begin.

ZCode Agent

Network & Troubleshooting Note

If you are behind a corporate firewall or proxy, configure your HTTP Proxy under **Settings** → **General** to ensure smooth connectivity to model services.
